#### 1.2 PRODUCTION AND SAMPLING CONDITIONS

Rocbolt Resins personnel considered the manufacturing facility was operating under typical conditions on the day of testing. Details of production conditions are available on request.

The following description of the process was supplied by Rocbolt Resins,

Rocbolt Resins manufactures resin capsules used as reinforcement for rocks/strata in the mining industry in conjunction with steel bolts and cables.

The capsules are a 2 part capsule, an outer plastic skin, sealed at both ends with clips and a separate inner compartment. The larger compartment consists of a highly viscous polyester resin mastic paste comprising approximately 20% polyester resin (contains Styrene monomer) & 80% inert limestone fillers. The smaller compartment consists of catalyst containing inert limestone fillers, benzoyl peroxide paste and oil or water as the carrier. The ratio of the two compartment ranges from 80:20 to 93:7 by weight.

#### 1.6 INSTRUMENT CALIBRATION DETAILS

#### 1.7 CONCLUSIONS

Emissions were monitored on the discharge side of the two dry carbon scrubbing units connected in series, at the Rocbolt Resins manufacturing facility with the following results:

- The average Styrene emission concentration (reported as Styrene) was less than 0.11mg/m<sup>3</sup> which was compliant with the EPL limit of 220 mg/m<sup>3</sup>. The styrene mass emission rate (MER) was 4X10<sup>-5</sup> grams per second (g/s).
- $\circ~$  The average benzene MER (reported as benzene) was less than 3.8 X 10^-5 g/s;
- The average total VOC MER (reported as n-propane) was less than 0.001 g/s;
- It is considered that these measured emission test results are consistent with effects of the recently refurbished activated carbon packing of these two scrubber towers;
- Rocbolt Resins advised that the variable speed extraction fan serving the scrubber system was running at its normal set point (20 Hertz) during the system efficiency testing. This is of the order of 50% of total flow;
- However, the fan speed is variable depending on demand for extraction within the plant. Rocbolt Resins advise that this is both an energy conservation and scrubber efficiency optimisation policy.
